

I am a satisfied user of the School Store Point of Sale (POS) software. We recently switched to the user friendly system after five years of using the QuickBooks POS system. We remodeled and upgraded our school store and felt the need to upgrade our register and software at the same time.

While the QuickBooks POS system had served our needs for a cash register for five years, it didn't allow us to perform some vital tasks. We were using a separate program to make labels and an old fashioned time clock to record employee hours. The School Store POS system allows us to perform these tasks with ease.

We purchased the register keyboards as well. They have made handling transactions a breeze. The amount of time needed to ring up a sale has been greatly reduced. We now run two cash registers at once and can handle over 100 customers in 20 minutes during our busy bagel sale mornings. Bagel sales have increased 30% while the time in line for hungry students has decreased by 50%.

Another great advantage of the School Store POS is its ability to accept gift cards. This feature has helped us increase our sales, especially at holiday time.

The reports we receive from our register system are invaluable. Regular activities like counting down a register and making a daily deposit are simplified with the School Store POS system.

Inventory management is much easier on the POS system as well. We used to keep our inventory on an excel spreadsheet because the QuickBooks POS system was so clumsy, it was never accurate. Now, we do monthly inventory management and reports with ease right from our register.

I would recommend the School Store POS system to any school store advisor wanting to keep accurate inventory and accounting records while training his/her students on state of the art equipment.
